06 What to confirm before you list

THE RED KIT GOES TO MARKET

Seven items go to market

Item	Detail	Qty	Low	High
RED Monstro 8K VV brain	PL, s/n 22895	1	$5,000	$6,500
RED DSMC2 Touch 7in LCD	Monstro top monitor	1	$845	$995
RED MINI-MAG 480GB	DSMC2 media	1	$370	$525
RED MINI-MAG 960GB	DSMC2 media	2	$1,200	$1,490
RED V-RAPTOR 8K VV brain	PL, s/n VRPB1000482	1	$16,000	$20,000
RED DSMC3 Touch 7in LCD	Raptor top monitor	1	$1,700	$2,200
Tilta cage for V-RAPTOR	Full or advanced kit	1	$400	$700
Total to market			**$25,515**	**$32,410**

The two 7-inch monitors and the Tilta cage add roughly $2,900 to $3,900 over the bodies and media alone.

Two complete packages, not seven listings

LOT A

Monstro package

- Monstro 8K VV brain, PL
- DSMC2 Touch 7in LCD
- Three MINI-MAGs, 2.4TB

$7,400 to $9,500

LOT B

Raptor package

- V-RAPTOR 8K VV brain, PL
- DSMC3 Touch 7in LCD
- Tilta cage
- One CFexpress card

$18,100 to $22,900

The MINI-MAGs only fit DSMC2 bodies, so they have nowhere to go but with the Monstro. A complete, shootable package clears the top of the comp band. Bare brains sit at the bottom.

ARSENAL UPGRADE

Upgrading the arsenal, not just the bodies

Item	Qty	Why it goes	Low	High
Blackmagic Pocket Cinema 6K	5	Three PYXIS 6Ks replace them outright	$4,250	$5,750
Sigma L-mount lenses	5	105mm x2, 85mm x2, 24-70mm. No L body exists	$3,100	$4,250
Sigma EF to L adapters	2	No L body, and the L glass is going with it	$260	$380
Metabones EF to E adapter	1	Only serves the zv-E10, which has its own lens	$180	$280
Metabones EF to MFT adapter	1	No Micro Four Thirds body in the Arsenal	$250	$350
Adds to the sale			**$8,040**	**$11,010**

WHAT THE UPGRADE BUYS

Five Pocket 6Ks pay for the third PYXIS 6K. The orphaned glass and adapters go into Sigma primes.

WHAT IF

Selling the Ronin 4D adds one prime at every level

WHAT WOULD GO

The Ronin 4D 8K combo and its DL 17-28mm, carried at $11,340 of book value. Realistic resale is $4,800 to $6,500.

That is a writedown of roughly half. Used 6K combos are clearing near $4,100 and 8K kits with the lens near $5,400, so the book figure will not hold.

Sale case	Without	With
Low	Two primes	Three primes
Mid	Three primes	Four primes
High	Four primes	Five primes

At Mid it is the difference between the three-lens set and adding the 24mm outright.

The trade is real coverage for real glass. The 4D is the only stabilised body you own, so this only makes sense if the gimbal work has dried up.

WHAT THE SALE BUYS YOU

Three ways the sale can land

Low is a quick dealer or trade sale at the bottom of every comp band. Mid is a private sale at fair asks with a few weeks of patience. High needs low sensor hours, complete packages and the right buyer.

Totals are the two RED lots plus the full Arsenal sweep. The Ronin 4D is not counted here.

The sweep is now a quarter of the total. Five Pocket 6Ks alone bring $4,250 to $5,750.

THE BUY SIDE

Five bodies, all PL, all powered

Item	Qty	Each	Total
Blackmagic PYXIS 12K, PL mount	2	$5,695	$11,390
Blackmagic PYXIS 6K, PL mount	3	$3,675	$11,025
Tilta foldable V-mount battery plate	5	$139	$695
California sales tax, estimated 7.75%			$1,791
Total to buy			**$24,901**

THE THIRD 6K IS FREE

The five Pocket 6Ks pay for it, with change left over.

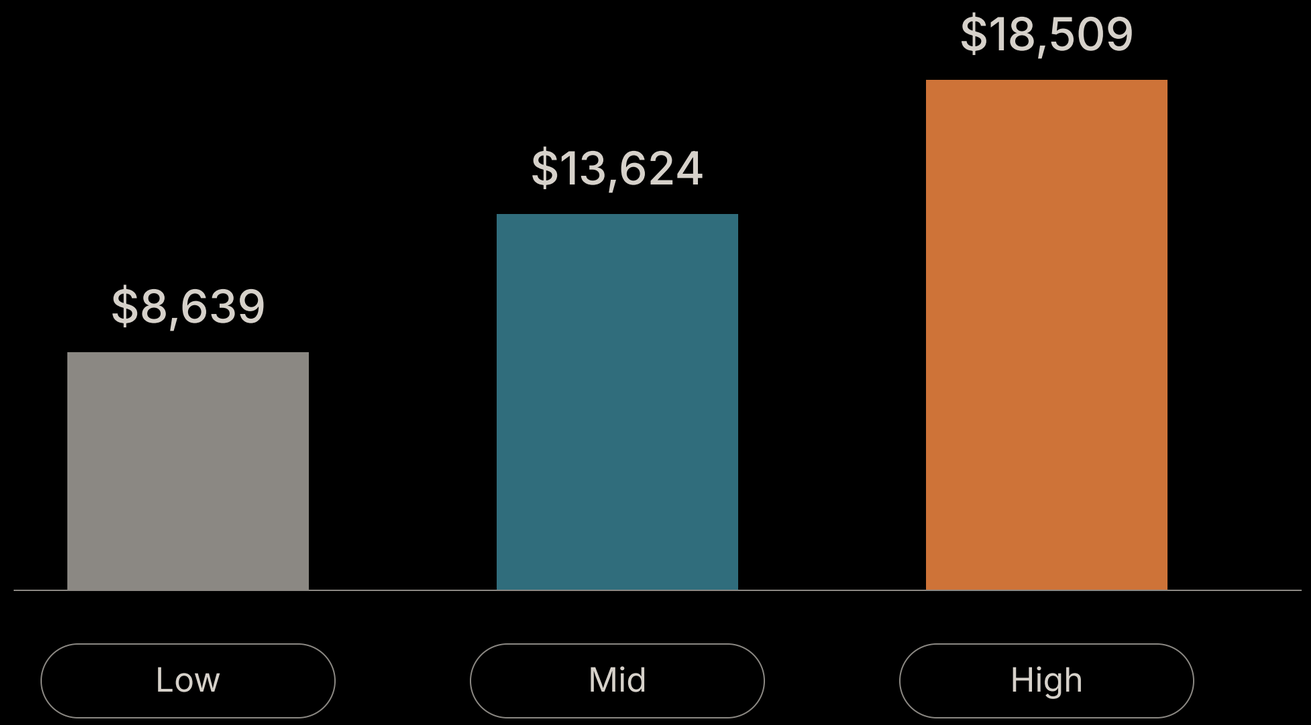

ONE LENS SET

Both formats are full frame, so one PL set serves all five.

Five bodies and a real lens budget

Five bodies and five plates cost $24,901 with tax. Bars show what is left for Sigma primes once the fleet is paid for.

Two primes at Low, all three at Mid, four at High. Selling the Ronin 4D would add one more in every column.

Three Sigma primes, bought one at a time

WIDE NORMAL · BUY 3RD

35mm

FF High Speed Prime T1.5

$3,849

Your wide end. Comes last because the other two cover more days.

MEDIUM · BUY 1ST

50mm

FF High Speed Prime T1.5

$3,849

The workhorse and the cheapest of the three. Buy this one first.

CLOSE-UP · BUY 2ND

85mm

FF High Speed Prime T1.5

$4,289

Interview and coverage. Pairs with the 50 for most of a shoot day.

The set is $11,987, or $12,916 with tax. The mid case funds all three with $708 to spare, and the High case reaches a fourth.

Selling the Ronin 4D would add one prime at every level, putting the 24mm inside the mid case outright.

Six things to confirm before you list

01	**Which V-RAPTOR is it**	Original or the [X] with global shutter. Worth $4,000 to $6,000 either way.
02	**Sensor hours on both bodies**	The biggest price lever, and what justifies the top of each band.
03	**The Angelbird card model**	Only the AV PRO SE v4 1TB is RED approved, and only on firmware 2.0.8 or later.
04	**Where the EF glass lands**	Selling all five Pocket 6Ks leaves no EF cine body. That glass runs on the R3 only.
05	**Your sales tax position**	A resale exemption moves $1,791 into the lens budget.
06	**Blackmagic media list**	Check the RED PRO and Angelbird cards against the PYXIS 12K list.

NEXT STEPS

Confirm the Raptor variant

Pull sensor hours on both bodies

Photograph both RED lots

List the Pocket 6Ks and L-mount glass

Sell privately, REDUSER or ShareGrid

Check the resale tax exemption

Two lots, five bodies
